Onshore Materials, LLC - LA State Contractor's # 48869
Onshore Construction, LLC - LA State Contractor's # 60129

With the fast-natured and competitive business of the construction industry in full swing in South Louisiana, Onshore Companies has chosen to use machine control to assist in the day to day operations at every job site. Use of machine control grade GPS products keeps Onshore Companies a step ahead of competition who have not yet integrated it into their workload. For this reason, Onshore Companies has moved from a motor grader and scraper with GPS to an additional seven dozers and three excavators equipped with the technology over the past ten years. The main reason of using GPS equipment in conjunction with heavy equipment is getting a very accurate end product to a design without having to rely on an operator's experience. The reason Onshore Companies trusts the Trimble brand is because they are at the top of the of the GPS era mountain and have been for years, not only in machine control, but also land surveying in general. The technology continually updates and Trimble always helps offset the costs of new products by trading in older equipment. The versatility and ease of use of the equipment helps Onshore Companies in producing premium construction design projects while saving time and money. As with every technology, there are always glitches. With the knowledgeable staff at Sitech and other resources, troubleshooting a problem is minimal and Onshore Companies can get back to work quickly and easily. In the end, as long as Trimble keeps updating their product line and giving great incentives to upgrade, Onshore Companies will keep doing just that.
